SUMMARY

MCA graduate with hands-on experience in software development, automation, and AI-integrated workflows. Proficient in Python and Bash scripting for automation, with exposure to CI/CD principles, Git-based version control workflows, and containerised deployments using Docker. Experienced in integrating LLM-powered pipelines and building scalable backend systems using Java, Spring Boot, and Flask. Strong interest in cloud-native solutions, distributed architectures, and emerging technologies such as AI/ML and LangChain-style frameworks. Comfortable working in fast-paced, collaborative Agile environments with a focus on system reliability and performance optimisation.

EXPERIENCE

Flutter Developer Intern

Feb 2025 – Present

Relu Consultancy

- Developed cross-platform mobile applications using Flutter and Dart, following Agile workflows with Git for version control and collaborative code management.
- Built a booking application (similar to District / BookMyShow) targeting toddlers through college-going students — supporting event discovery, seat selection, and payment workflows.
- Developed a fully automated lead-extraction pipeline that processes raw data, extracts valid emails, and sequences personalised outreach — applying Python scripting and automation principles.
- Engineered an automated LinkedIn lead-generation service that monitors posts, extracts commenter profiles, and dispatches formatted, sequenced outreach emails — leveraging LLM-based content generation for intelligent output.
- Collaborated with backend teams to integrate REST APIs into mobile screens, contributing to scalable, distributed service architectures.
- Documented workflows and API integrations to support team knowledge-sharing and maintainability.

PROJECTS

FlowForge — Automated JD Resume Customization Tool

Oct 2025

Technologies: Python, Java, Flask, PostgreSQL, Selenium, Angular, Spring Boot

- Built an automated pipeline that scrapes job descriptions and dynamically tailors resumes based on keyword and role relevance — using Python scripting and NLP-driven matching logic.
- Implemented backend logic to process JD data, map required skills, and generate customized resume content.
- Designed RESTful APIs to handle job scraping, resume generation, and data persistence workflows.

ShelfSync — Enterprise Inventory Management System

May 2025

Technologies: Spring Boot, PostgreSQL, RESTful APIs

- Built a scalable inventory management system to manage products, batches, stock levels, and availability across distributed data layers.
- Implemented backend services for inventory tracking, batch lifecycle management, and real-time stock updates.
- Designed RESTful APIs to support inventory operations and reporting functionalities.

CafeEase — Cafe Management System

Apr 2025

Technologies: Angular.js, Java, Spring Boot, Hibernate, MySQL

- Developed backend services for order processing, billing, and inventory updates with consistent database state management.
- Implemented business logic for order lifecycle management and stock deduction based on transactions.
- Integrated database operations to ensure consistency between orders, inventory, and billing records.

ARtify — Augmented Reality Face Filter Web App

Apr 2024

Technologies: Python, Flask, OpenCV

- Developed a web-based AR application applying real-time face filters using computer vision techniques.
- Implemented backend services to manage image processing requests and optimise system performance under load.
- Integrated CV models to detect facial landmarks and render dynamic AR effects.

TECHNICAL SKILLS

Languages:	Java, Python, Dart, Bash, SQL, JavaScript
Mobile Dev:	Flutter, Dart, Android Studio

CI/CD & DevOps:	Git, GitHub, Gerrit (familiar), Jenkins (familiar), Docker, Kubernetes (familiar)
Cloud & Infra:	Render, Exoscale (familiar), cloud-native deployment principles
AI/ML & LLMs:	LLM integration, LangChain-style pipelines, Python-based automation, IBM AI certifications
Backend & APIs:	Spring Boot, Flask, Express.js, Hibernate/JPA, RESTful APIs
Web:	HTML, CSS, Angular (Basic), JSON
Databases:	PostgreSQL, MySQL
Dev Tools:	IntelliJ IDEA, VS Code, Postman, OpenAPI, Jupyter Notebook

EDUCATION

Master of Computer Applications (MCA) *Sept 2024 – Present*
SRM University, Sonepat, Haryana *Current CGPA: 7.89 / 10.0*

Bachelor of Computer Applications (BCA) *Sept 2021 – May 2024*
United University, Prayagraj, Uttar Pradesh *CGPA: 9.05 / 10.0 | 1st Rank in Class*

CERTIFICATIONS

- Software Engineering Job Simulation — JPMorgan Chase & Co. (Forage)
- Development with Java — Enterprise Java and Spring Framework
- Python for Data Science — IBM
- Artificial Intelligence Analyst — IBM
